Michael says: I've been having this problem for a few days now, and haven't found an answer anywhere. It won't let me drag and drop, and I have to manually copy and paste. I think I have a good amount of memory and space, and I have a 20 GB HD as my main hard drive. Help me. Is there a reason why I can't drag and drop? Xisor: Any 'sudo fdisk -l' in terminal? I have a new system - fresh install of Ubuntu 18.04 - and I get an error when I try to install any kind of language app. This is a new system running from a USB key I formatted to ext4 (this is a new system that already worked on 16.04). I suspect a "kernel" issue but as I have now formatted the USB and used a different USB stick and I still get the same error message. It is not about sudo apt install because it fails before I even get to the package selection - I suspect the ISO is corrupt but I cannot find any reason it would have changed from the original installation on the USB. Bashing-om, Has anybody ever got a language to install to a fresh new Ubuntu system? I cannot get any languages to install. Has anybody got any ideas? Xisor: See is there a different IRC channel for Ubuntu server? I can't find a channel called ubuntu-server on the Freenode website. AJH101: your system is old or your install is bad. My system is brand new - fresh from the laptop box with USB key formatted to ext4 - everything on it fresh from the box. Xisor: Ubuntu Server Edition is a release of Ubuntu designed especially for server environments, including a server-specific kernel and no GUI. The install CD contains many server applications. Current LTS 82157476af
